

# SPEEDMAN® SMART BOX

Paper dispenser box for individual and eco-friendly packaging

The SpeedMan® SMART BOX is the practical paper dispenser box for filling shipping packages. Ideally suited to smaller shippers providing a professional packaging process and therefore improving customer experience. The SpeedMan® SMART BOX is the ideal introduction to a manual, eco-friendly filling and cushioning solution.

Whether filling cavities, wrapping sensitive products or as an intermediate layer – the SpeedMan® SMART BOX combines several application possibilities in one and thus enables needs-based product protection. The paper can be removed from the front opening as filling material, which is ideal for fixing products

in the shipping box. To use the paper as an intermediate layer or for wrapping, the material is pulled out from the side and cut off. In addition, the SpeedMan® SMART BOX can be easily transported and flexibly positioned at the packing station.

Even with low shipping volumes, shippers can make their packing process sustainable thanks to the SpeedMan® SMART BOX. The filling material is made of 100 % recycled paper and is Blue Angel certified. This makes the SpeedMan® SMART BOX a space-saving alternative to plastic-based filling materials such as filling chips or air cushions.

- Dimensions: 37 x 25 x 27 cm
- Filling volume: 1.0 m<sup>3</sup>
- Weight: about 8 kg
- Paper quality: 70 g/m<sup>2</sup>
- Linear metres: 300 m
