

SPEEDMAN BOX®

The handy and eco-friendly paper dispenser box

The SpeedMan BOX® is the ideal void filler solution for fast and eco friendly in box product protection. Perfect for filling and stuffing packages for operators of online shops (beginners or professionals in the e-commerce business) as well as for private parcel deliveries.

It is ideal as a space-saving alternative to filling chips. The filling volume of 1.5 m³ that can be produced at the packing station is equal to the volume of 3 bags of conventional filling chips. One box is sufficient for up to 1,000 packets. Because of its small storage space of only 30 x 40 cm it can be optimally used at any packing station.

Used as fill material or a “paper coil” – SpeedMan® paper is well suited for all types of dispatched articles, whether small or large, fragile, light or heavy.

The SpeedMan® paper consists 100 % of recycled paper and is awarded with the ecolabel Blue Angel. The manufacture of in-house production takes place in Germany in accordance to the latest standards including the ISO 50001 certification.
